

AOS QA Activities Report

June - July 2025

This report provides a comprehensive overview of the Quality Assurance activities performed for the AOS platform during the June-July 2025 period. It covers manual testing, automation progress, defect tracking, and release performance metrics.

Release/Patch Count by Environment

A summary of the total patches tested in each environment.

6

Total Patches Tested

5

Patches in UAT

1

Patches in PreProd

New Manual Test Cases by Release

A quick summary of the number of new test cases added for each release.

19

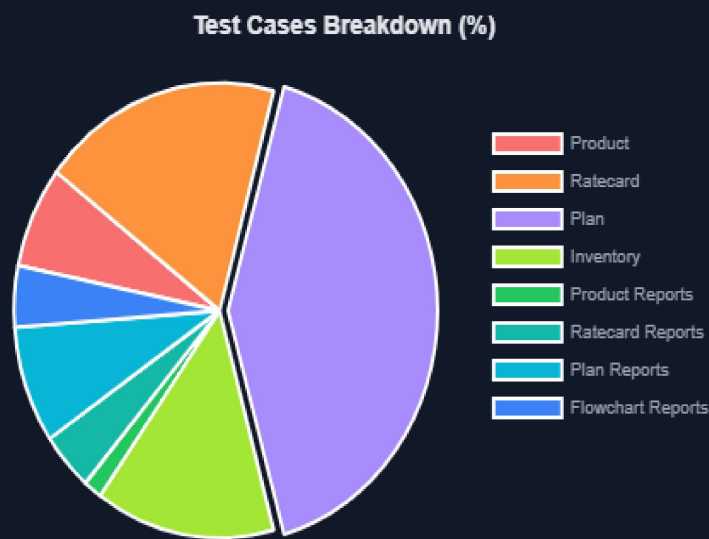

New Test Cases (2025.6)

4

New Test Cases (2025.7)

Test Case Breakdown by Module

Total test cases per module up to the 2025.7 release.

19

June 2025 Cases

4

July 2025 Cases

552

Total Test Cases (2025.7)

Automation & Coverage

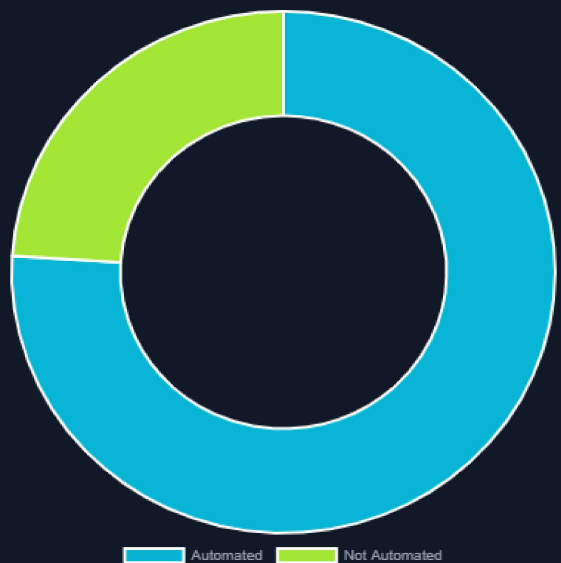

Analysis of automation efforts and test case coverage increase.

QA Challenges

Digital Challenges

- Digital regression test case automation is at **40%**. We are actively updating scripts to adapt to new changes.
- The existing test scripts are outdated. Access to **current scripts and documentation is required** to adapt to new features.

FTS Challenges

- The team has developed scripts for **8 deals** (2 in each Order Type) to be used for automation.
- These deals will be created as a draft for every Patch/Release (in line with UAT) through Automation.

DM & Notes

DM

- Provide clear expectations for the QA team regarding DM environment testing.

General Notes

- The process of running and analyzing scripts for each release is a continuous effort that requires significant time and resources for fixing issues and adapting to new changes.
- The test scripts that we currently have are pretty old. We would require latest test scripts or documentation(if any) to understand the functionality to be able to adapt to new features/changes implemented.

Thank You!

We appreciate your time and attention.
